Retail Sales Performance Analysis

Transforming Transactional Data into Actionable Insights

Oreoluwa Kushimo

Objective

To translate complex retail sales data into clear, actionable insights that support decision-making.

Focus Areas:

- Revenue performance
- Geographic and store trends
- Product category contribution
- Pricing and discount effectiveness
- Customer payment behaviour

Data Overview

- 4.5M+ transactions
- 7M+ units sold
- Multi-country retail operations

Datasets integrated:

- Transactions
- Customers
- Products
- Stores
- Discounts

Analytical Approach

From raw data → structured insights → business recommendations

- Cleaned and validated large-scale transactional data
- Integrated datasets (transactions, customers, products, stores, discounts)
- Engineered key metrics (Revenue, AOV, Discount impact)
- Segmented performance by geography, category, and payment method
- Identified trends and performance drivers through exploratory analysis

Key Performance Metrics

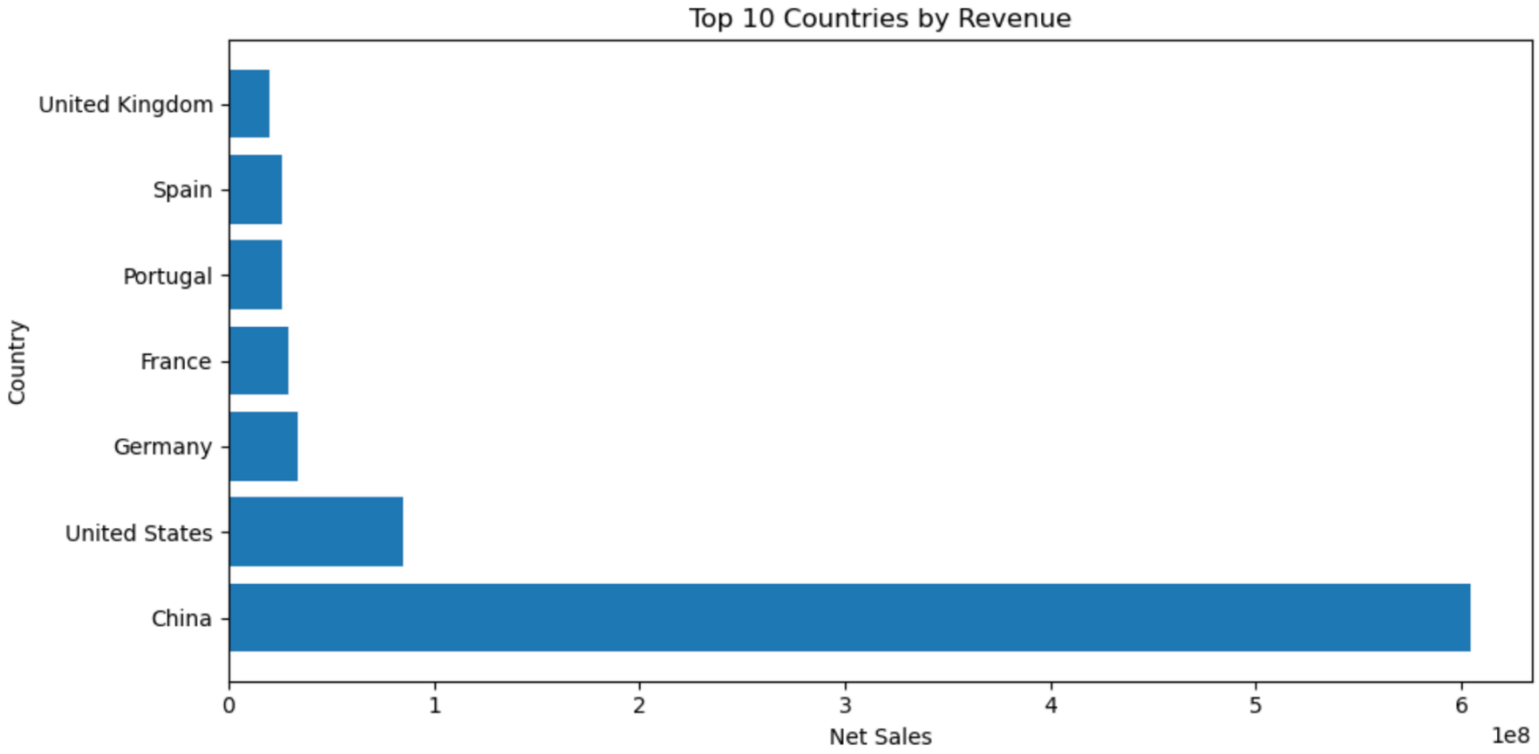
- **Total Revenue:** 825M+
- **Total Transactions:** 4.5M+
- **Total Units Sold:** 7M+
- **Average Order Value:** ~182
- **Total Discount Given:** ~110M

Insight:
Discounting represents a major cost with limited impact on revenue growth.

Key Insights

1. Revenue concentratio risk

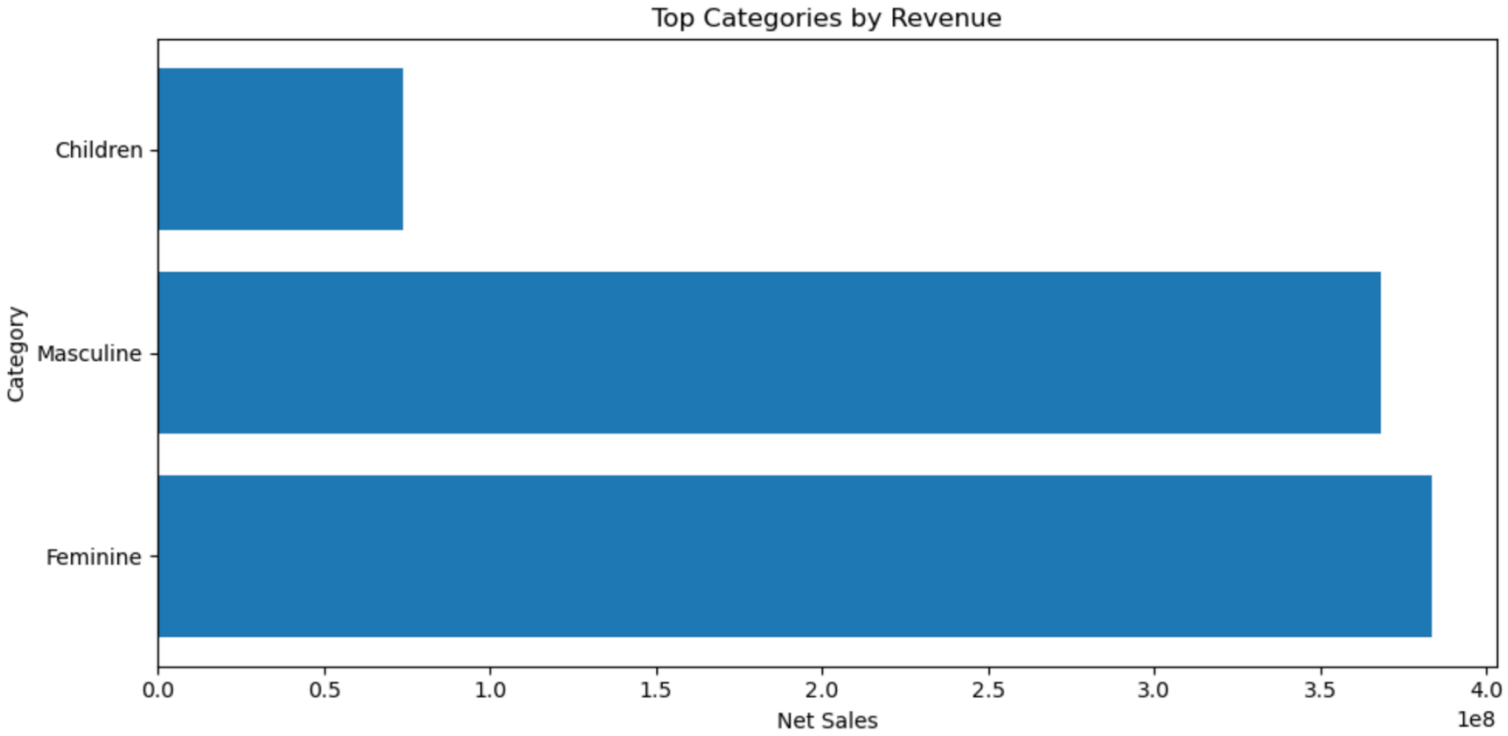
Revenue is heavily concentrated in China, creating dependency on a single high-performing market.



Revenue by country chart

2. Category dependency

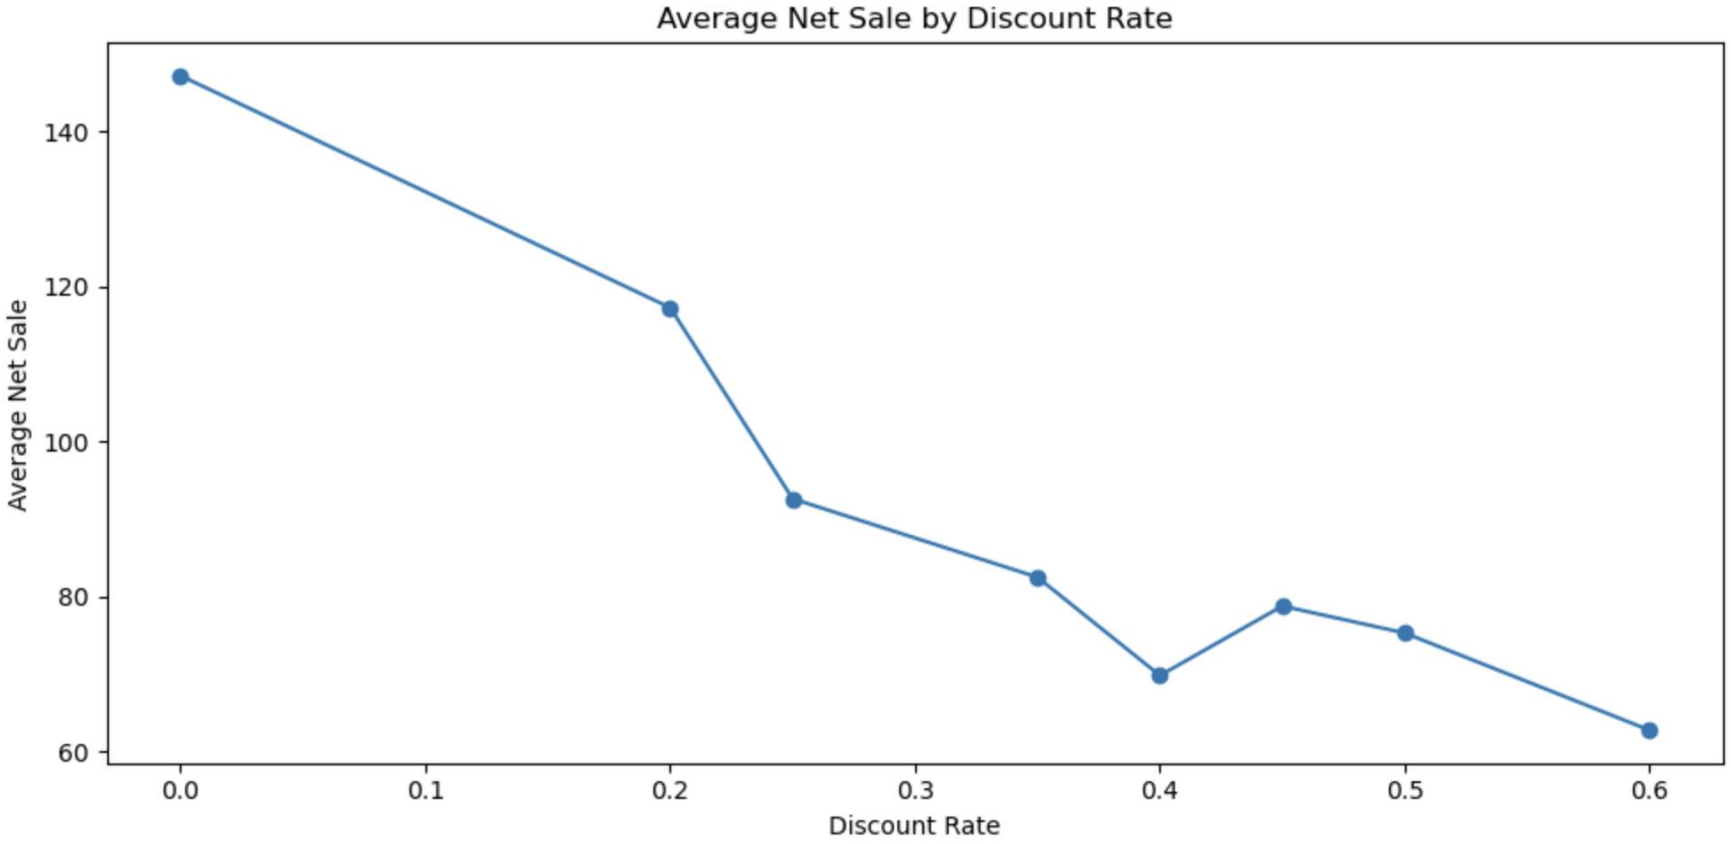
A small number of product categories (Feminine & Masculine drive the majority of revenue.



Revenue by category chart

3. Limited impact of discounting

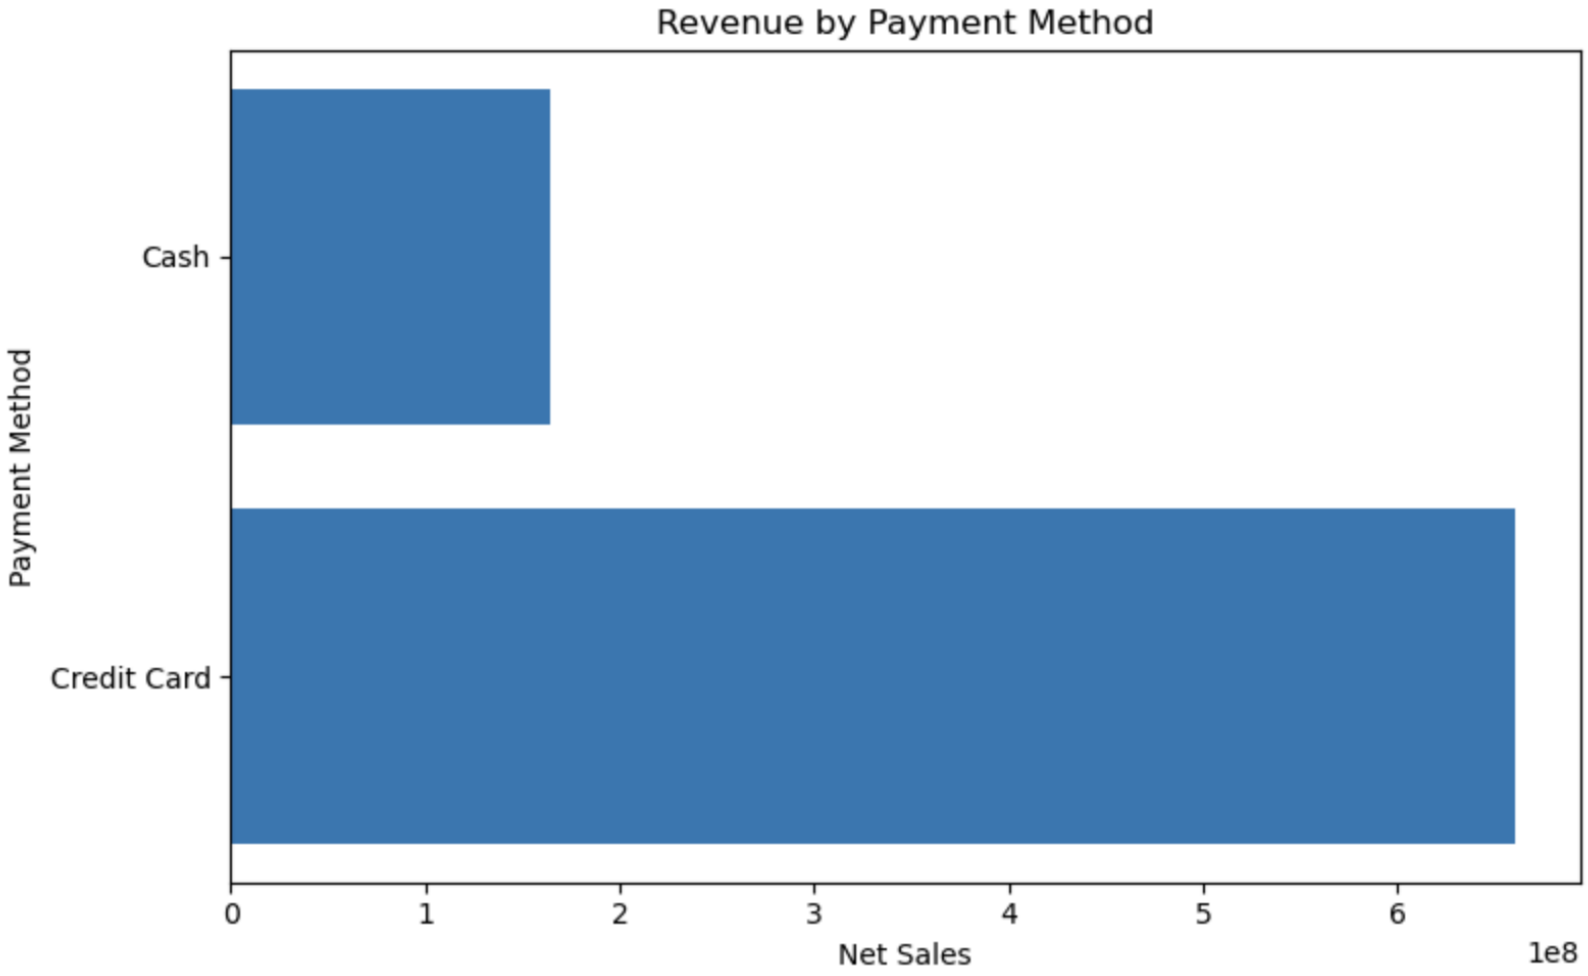
Higher discount levels reduce average order value and do not significantly increase transaction volume.



AOV chart

4. Customer payment behaviour

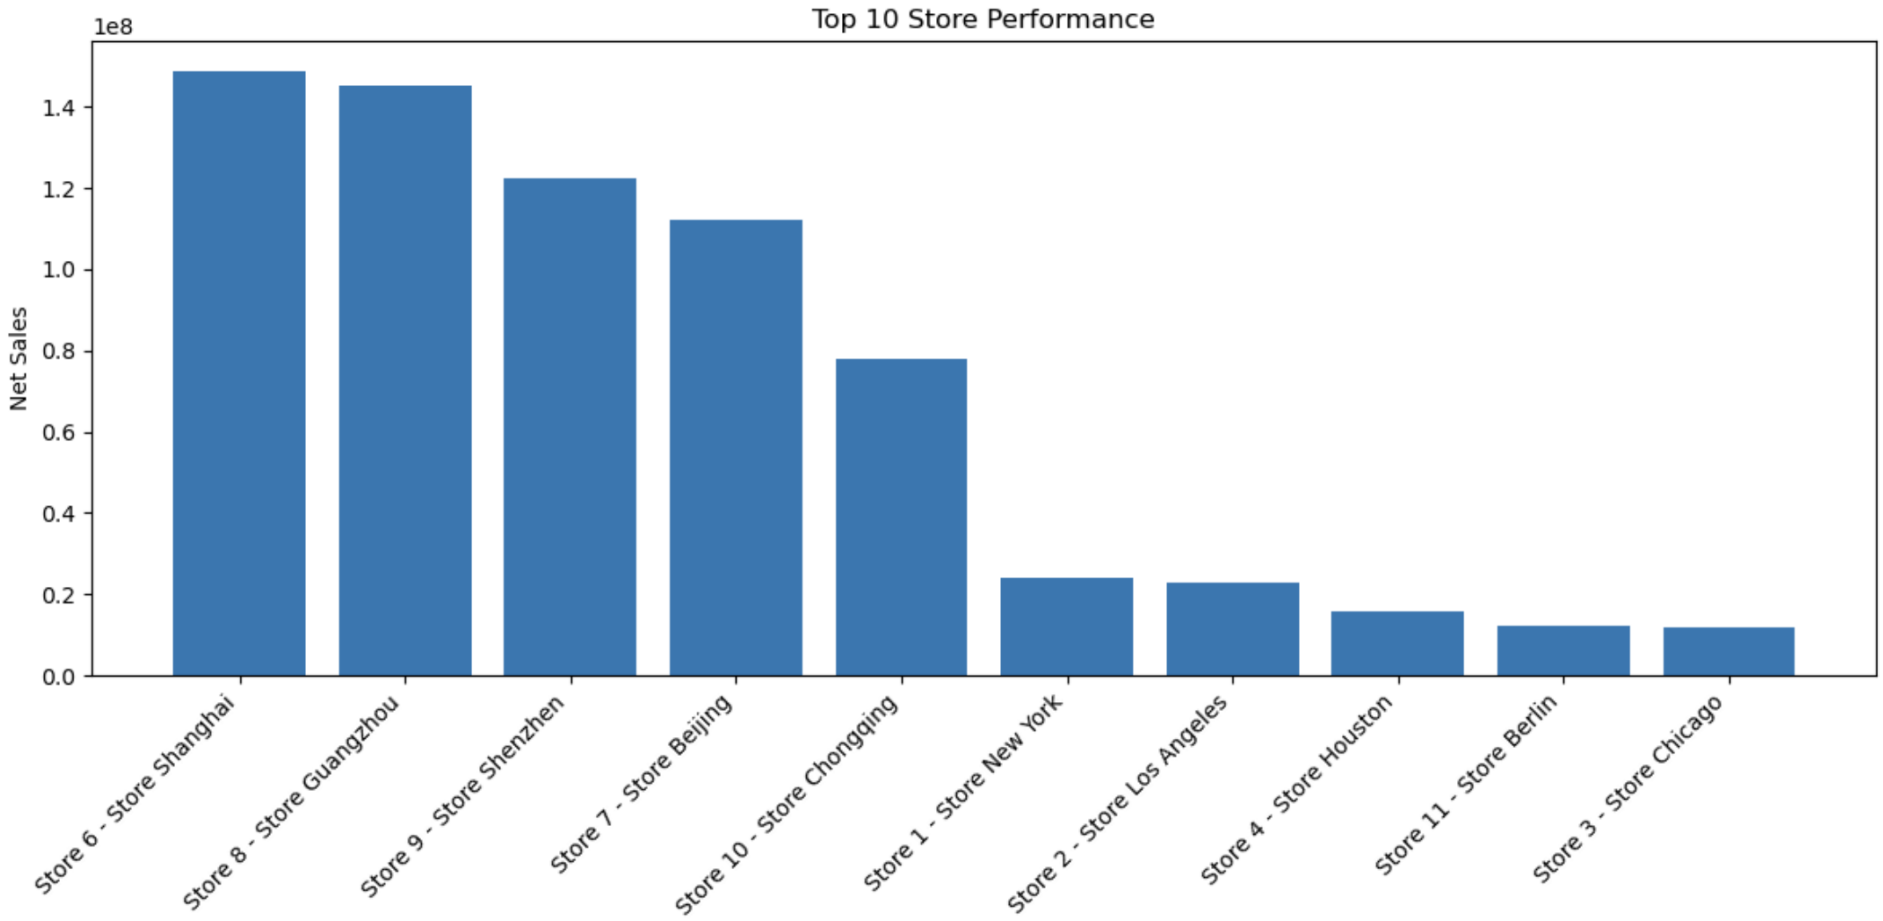
Credit card payments dominate, indicating strong preference for digital payment methods.



Payment method distribution

5. Regional performance differences

Store performance closely follows geographic trends, with Asian markets outperforming Western regions.



Store performance

Trends & Patterns

Across all analyses, three consistent patterns emerge:

- Revenue is highly concentrated in specific markets
- Performance is driven by a limited set of product categories
- Discounting does not significantly influence transaction volume or revenue growth

Key Pattern:

Business performance is primarily driven by geographic demand and product mix, not pricing incentives.

Risks & Opportunities

Risks:

- Over-reliance on a single geographic market
- Revenue concentration in limited product categories
- Inefficient discounting impacting margins

Opportunities:

- Expansion in underperforming regions
- Growth through category diversification
- Margin improvement through pricing optimisation

Recommendations

1. Reduce reliance on a single market
Diversify growth beyond China to mitigate concentration risk.

2. Strengthen category strategy
Expand high-performing categories and reassess underperforming segments.

3. Optimise pricing approach
Shift from broad discounting to targeted, data-driven promotions.

4. Standardise best practices across underperforming regions
Replicate best practices from top-performing stores across regions.

5. Enhance payment efficiency
Continue optimising digital payment systems to support customer preferences and operational efficiency.

Summary

- Revenue performance is strong but highly concentrated
- Growth is driven by specific regions and product categories
- Discounting has limited impact on overall performance
- Operational performance varies significantly across locations
